

Energy Assistance Software (EAS) From Roeing Corporation

CREATING SOFTWARE FOR LIHEAP SINCE 1998

Roeing Corporation has worked closely with the State of Indiana to create software that effectively manages the complex data associated with the LIHEAP. It features a smart-client interface, which allows all of the state's data to be stored in one centralized location, to be accessed securely through an Internet connection. Client information can be accessed, entered, and reported in real-time, with role based security.

Smart Client Interface

EAS is designed with an easy to use Windows desktop interface; screens are organized in logical and intuitive ways.

Automatic Updates

EAS is designed to automatically check for updates and securely download those updates to your computer. No more patches—we do all the work.

Import Data Easily

Once data is entered on an application, it can be imported into the future years with just a click of the button. This saves you from having to enter data more than once if the application applies for multiple years.

Poverty Level and Benefit Calculations

Put your calculator away; EAS automatically calculates the benefits for the household and poverty level based on the data entered.

Online and Real Time Fraud Checking

EAS checks the database and determines if an individual has applied at another agency location.

For more information and a demonstration of how our software can work for you, contact Brad Forgey, Special Projects Manager at bforgey@roeing.com

Features

- Client demographics
- Benefit and approval status
- A customizable action list for each applicant
- Integrated with Weatherization to provide referrals
- Role based security
- Central intake data for non LIHEAP tracking
- Electronic vendor transmittals
- Claim payment
- Budget and financials
- Labels for mass mailings
- Batch claim creation
- Track applications across multiple years
- Offline application intake
- Centralized database

Reports

Statewide and Agency Level

Report Name	Report Function
Statistics	Aggregate counts of benefit breakdowns and on demographics served
Budget	Aggregate information on funding programs used
County Statistics	Aggregated breakdown of households served per county
Weekly call-in	A weekly summary of benefits as compared to YTD
CSBG	Unduplicated demographic counts report for use in NASCSP reporting

Client Level

Report Name	Report Function
Applicant Balances	Amounts served to customers
Unobligated Balances	Households where the benefit amount is different from the funds received
Claims audit trail	Audit trail of modifications made to claims
Matrix audit trail	Audit trail of changes made to factors used in the benefit matrix calculation
Fraud Checking	Report on applications that are possible fraud based on address, name, and Social Security Number
Notification Letters	Used to notify applicants of their approval and benefits
